
Cell: runs (of 30 per library; fewer completed in parentheses) in which the class occurred; shade = share of completed runs. Dark outline: behaviour that contradicts the library's documentation (rule pre-specified in Study 2, applied post hoc in Study 1). Study 1 D3x comes from Study 3. C1 (corner evaluations) is shown apart because it proved non-specific. "repeated": median share of re-evaluated points. "0": checked, not found. Hatched "n/a": the adapter does not return the check's input (C4: no documented maximum; R1: no returned point; R2/R3: no returned value). "?": applicability not archived per run.
